

Double Skin Steel Partitioning high quality and hygienic.

The Titan System has been designed especially for areas where clean processes are undertaken, with the flush design and its two line junction keeping particle traps to an absolute minimum. Titan is used worldwide in cleanroom applications and in any manufacturing area where a degree of cleanliness is required.

Our glazed panels use toughened glass with polished edges, that fit perfectly flush with the steel panels with the option of internal blinds. Titan panels have the ability to transform any workplace into a modern clean environment.

Through smart engineering and careful manufacturing using the correct air handling and HEPA filters makes the Titan panel system a popular solution for mid range cleanrooms. (ISO 14644-1 class 5,6,7 & 8)

Titan Panels

Titan Panels have been designed to allow individual panels to be removed without affecting the rest of the panel system. This makes it an ideal choice for application where layout may require some alteration.

The standard height for full steel and steel glass steel panels are: 3000, 2695 and 2390mm with standard widths of 300, 500, 600, 900 and 1000mm

The Panel system with glass height of 1600mm have the same standard height sizes but have a standard width of 500mm.
